Eyelit offers integration with third-party applications through the use of a Public API. A series of endpoints are exposed and can be called by an external system (normally a middleware provider) to make changes directly within a given instance of the Eyelit software. The calls to these endpoints are performed through the use of pre-formatted JSON packets and are authorised through OAuth 2.0. For detail on the authorisation process, see [Authentication](#).

This documentation provides technical information on the endpoints available to call through the Eyelit MES-M Public API relating specifically to the 'Recipe' functionality. The endpoints covered are listed in Table 1.

Table 1 - Summary of Recipe-Related Public API Endpoints

API Endpoint	High Level Description
/api/Recipe/List	Reads existing Recipes within Eyelit MES-M and returns a payload
/api/Recipe/Upsert	Creates a Recipe or updates a Recipe that already exists within Eyelit MES-M
/api/Recipe/Delete	Deletes an existing Recipe if it has not been used
