Issue

24/11/2026 4:33 pm GMT

The eCHR captures details of any issues raised against an item, together with all documents (see Documents) associated with those issues. This ensures a complete and traceable record of quality-related events is maintained within the eCHR for each manufactured item.

Issue information is linked to the eCHR line at the point each issue becomes relevant to the item or operation, with the record updated automatically as the issue progresses through its lifecycle.

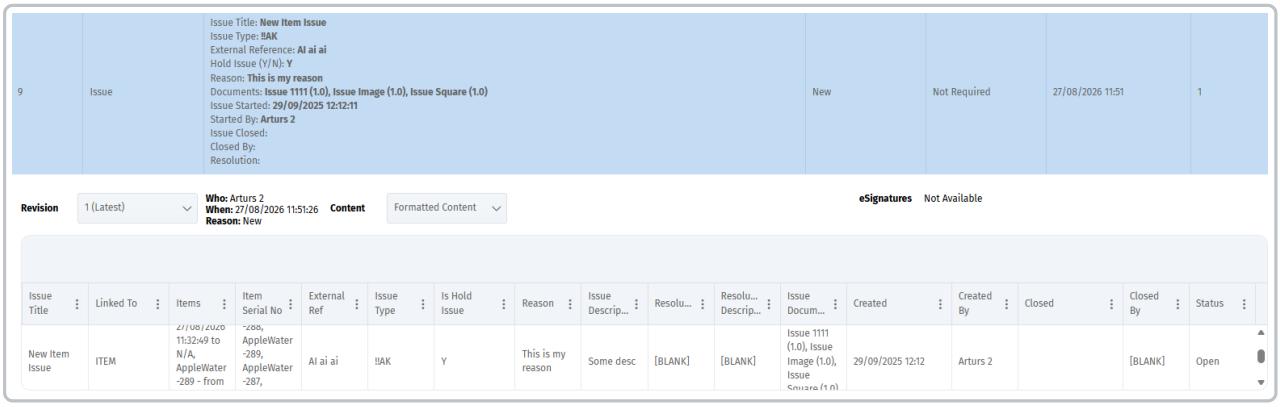

Triggers

- **Job**: A job-linked issue will trigger an inclusion in the eCHR when an issue is created or updated that is linked to the job on which any items in the eCHR are being processed.
- **Job Operation Issue**: Line created at the creation of any visits for the linked operation.
- **Workflow Node Issue**: Line created at the creation of any visits for the linked operation.
- **Item Issue**: Line created at the point the issue is created.
- **Item Operation Issue**: Line created at the point the issue is created.

Updates the eCHR record when any of the following events occur:

- The issue is updated.
- The issue is unassigned from the linked entity.
- A new issue document version is assigned to the issue.
- Issue documents are unassigned from the issue.
